

Attach an Asset to an Existing Work Order

You can create unattached work orders, but it is recommended that you eventually attach all unattached work orders to assets.

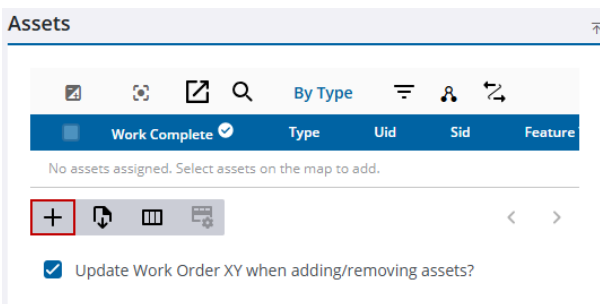

1. Open the work order you want to attach an asset to.
2. Click **Show map options** to open the map in split screen or full screen.

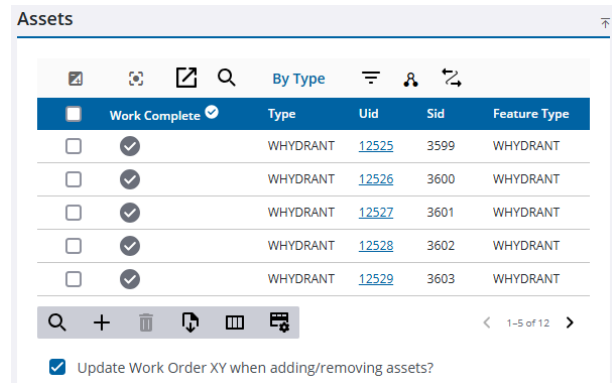

3. On the map, use the **Legend** tool to select the layer you want to make selectable.
4. Use a **Selection** tool and select the asset or assets on the map.

5. On the **Assets** panel, click **Add From Map**.

The selected assets appear in the **Assets** panel.

6. Click **Save**.

The assets are now attached to the work order.
