

Capture a Signature: Inspection Attachments Panel

An inspector can capture a signature from the **Attachments** panel.

1. Open an inspection and scroll to the **Attachments** panel.
2. Enter the name or initials of the signer in the **Signer Name** field.
3. Use the mouse or a finger to draw a signature to match the name in the **Signer Name** field.
4. Click **Save**.

The signature is saved as an attachment with an extension of PNG. It is named **InspectionSignature**.

When you view the signature, it shows the signer's typed name or initials, a description of the task, and the digital signature.
