

Utilize Asset Details

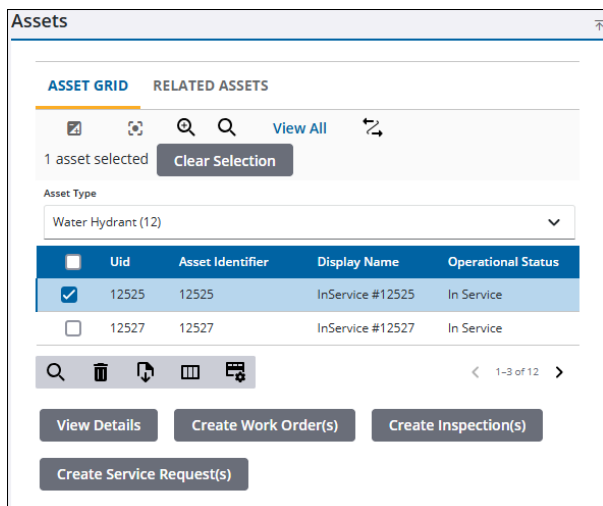

Asset Details allows users to interact with assets selected on the map. This includes highlighting assets on the map, creating attached work orders or inspections, editing asset attributes, and viewing the work summary of an asset.

1. Select assets on the map.

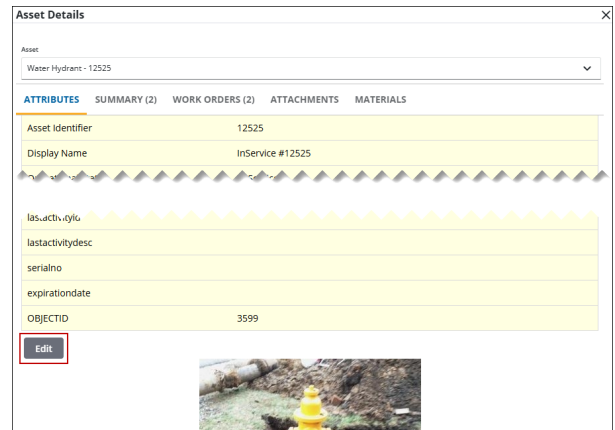

2. Open **Asset Details**. See [Add Menu Items](#) in the Respond Guide for Trimble Unity Maintain and Trimble Unity Permit for more information on adding apps or pages you need or want to access.

The **Assets** panel automatically populates with the selected assets and their details.

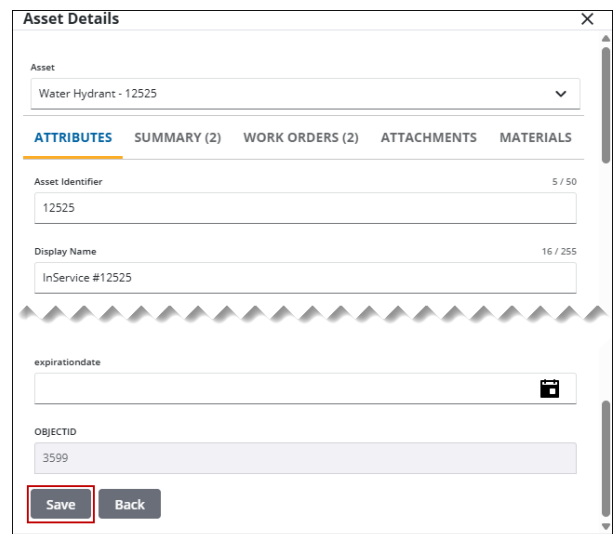

3. To create a work activity, select the desired asset and click **Create Work Order(s)**, **Create Inspection(s)**, or **Create Service Request(s)**.

4. Select an asset and click **View Details** to view related **Attributes**, **Summary**, **Work Orders**, **Inspections**, and **Cases**.
5. To edit **Attributes**, click **Edit**.

6. Click **Save** after making any changes.

NOTE: Work orders must be closed to see costs in **Asset Details**.
