

Add a Profile Description

A description can be added to a profile to help administrators know how to define the profile in Admin. For example, the profile's description can explain that many controls are hidden or revealed in the profile or the profile should be used for a specific group or crew of users.

the Admin Guide for Trimble Unity Maintain and Trimble Unity Permit for more information.

1. Select the profile from the **Profile** drop-down list you want to add a description to.
2. Enter a **Description**.

3. Click **Save Profile**.

The description is saved for the profile. If a profile is viewed or selected from a drop-down list, a brief description of the profile's use displays next to the profile name.

Panels where this can be viewed include: the **Create Profile** and **Import Layouts** panels as well as the **Profile** drop-down list in the **Settings** menu. The description also appears in Admin when defining a profile. See [Define a Profile](#) in
